CORE COMPETENCIES

Data Infrastructure & Modeling
LookML & Semantic Layer
Snowflake Optimization
ELT Pipeline Orchestration
BI Dashboard Development
Data Quality Frameworks
dbt Transformation
Executive Reporting
Cross-functional Collaboration
SQL (CTEs, Window Functions)

TECHNICAL SKILLS

BI & Visualization:
Looker, LookML, Advanced Excel
Data Warehouse:
Snowflake, MySQL, SQL
Transformation:
dbt (models, tests, docs, macros)
ELT & Pipelines:
Fivetran, schema monitoring
Data Sources:
Salesforce, Jira, ServiceNow, NetSuite
Programming:
Python (Pandas, scripting)

EDUCATION

B.Tech — Electronics &
Communication Engineering
LBRCE, JNTU | 2018–2022
CGPA: 8.63 / 10

PAVAN KUMAR LANKAPALLI

Analytics Engineer | Data Infrastructure & Insights

PROFILE SUMMARY

- Analytics Engineer with 2+ years building scalable data infrastructure, semantic data models, and self-serve BI platforms at Phenom.
- Proven expertise in LookML, Snowflake, and dbt-style data modeling with a track record of cutting warehouse costs by 40% through query optimization and Persistent Derived Tables (PDTs).
- Hands-on with end-to-end ELT pipeline orchestration using Fivetran, cross-platform data quality frameworks, and executive-grade dashboards (CSAT, CES, QBRs).
- Bridges the gap between raw data engineering and business intelligence — delivering trusted, governed datasets that empower Customer Success and C-suite leadership.

WORK EXPERIENCE

Mar 2024 – Present: *Phenom, Hyderabad*

Mar 2024 – Dec 2025
Associate Analytics Engineer

Dec 2025 – Present
Analytics Engineer

Data Infrastructure & Cost Optimization

- Architected and deployed Persistent Derived Tables (PDTs) and materialization strategies in LookML, reducing Looker infrastructure costs by 40% while improving dashboard load times by ~60%.
- Designed and maintained a semantic layer in LookML covering 15+ explores and 50+ reusable views, enabling self-serve analytics for non-technical stakeholders.
- Authored complex SQL queries in Snowflake leveraging CTEs, window functions, and clustering optimizations to process multi-million-row datasets.
- Proactively monitored PDT build schedules and execution thresholds, maintaining 99%+ system uptime for business-critical dashboards.

ELT Pipelines & Data Quality

- Orchestrated ELT pipelines using Fivetran, ingesting data from Salesforce and Jira into Snowflake with automated schema drift detection — ensuring zero data loss across source-to-report flows.
- Implemented a rigorous cross-platform data quality framework with reconciliation checks between Jira, Salesforce, and Looker, achieving 100% data integrity across all executive reporting surfaces.
- Defined and enforced data contracts and field-level documentation in LookML, improving data discoverability and reducing analyst onboarding time.

Business Intelligence & Executive Reporting

- Built and owned comprehensive CSAT (Customer Satisfaction Score) and CES (Customer Effort Score) dashboards enabling the Customer Success team to proactively identify friction points and improve NPS and retention.
- Developed high-visibility executive dashboards for WBR, MBR, and QBR, providing C-suite leadership with real-time KPI visibility and enabling data-backed strategic decisions.
- Collaborated with Customer Success, Product, and Operations stakeholders to gather requirements and iterate on dashboard design — reducing time-to-insight from days to hours.

KEY ACHIEVEMENTS

- 40% reduction in Looker infrastructure costs through PDT optimization and smart caching strategies.
- 100% data integrity maintained across Salesforce, Jira, and Looker via automated cross-platform quality checks.
- 15+ LookML explores built and maintained as a governed semantic layer serving multiple business units.
- Zero-downtime ELT pipelines built on Fivetran + Snowflake supporting real-time executive reporting.
